FOR IMMEDIATE RELEASE

ASSA ABLOY Global Solutions – Critical Infrastructure to feature ALWIN security management software at ISC West

Software platform now available to U.S. customers seamlessly connects locking hardware and devices in remote locations to existing access control systems.

Irving, TX – February 7, 2023 – ASSA ABLOY Global Solutions – Critical Infrastructure (booth 8101) will showcase its robust ALWIN security management software as part of a total access management solution for critical infrastructure customers in the U.S. at ISC West. The annual conference takes place March 29-31 in Las Vegas.

ALWIN is a modular, scalable and flexible software solution for critical infrastructure protection, designed to monitor and protect security-challenged sites against intrusions. It includes supervision software organized into several modules for systems integrators to customize for their unique customer applications, including access control, CCTV, intruder alarm, visitor management, and key management.

Jerry Burhans, managing director for AAGS – Critical Infrastructure, says this is especially important for monitoring a range of security hardware, perimeter systems and intrusion detection devices, as well as managing access rights in distant sites across different states and time zones.

“ALWIN is a unique software platform that brings the full range of our ASSA ABLOY security locks, [ABLOY® PROTEC²](#) padlocks and cylinders, [CLIQ access software](#), and [ABLOY® BEAT](#) keyless Bluetooth® devices together with video management and intrusion detection to bring real-time visibility and access management to these critical infrastructure sites,” explained Burhans.

ASSA ABLOY Global Solutions had announced that France-based [ALCEA](#), developer of ALWIN software, was merged into its [Critical Infrastructure](#) business in 2022.

“Having this in our U.S. portfolio fills a needed gap because now it gives facility managers and systems integrators a whole system – *software and security hardware together* – allowing full visibility of critical site equipment and situational awareness. Several technologies, systems or protocols can be upgraded together, on both new and existing installations.”

Burhans states that as customers deploy more and more edge devices within their infrastructure, all of which require audit trail, NERC/CIP compliance, and status updates, they need a scalable top-line solution capable of integrating into the enterprise access management systems they install in their facilities.

“That’s why ALWIN integrates or interfaces with more than 100 leading technology manufacturers of access devices, readers and video systems. You can connect what you want. And we are proud to be good partners with all of these popular brands in the industry.

“We are transforming ourselves from a locking device solution into a full solution provider for critical infrastructure customers,” sums up Burhans. “Having ALWIN is a big step into a connected future where we can help manage our customers’ entire security and access ecosystem with seamless, third-party integration capabilities.”

About ASSA ABLOY Global Solutions

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world. ASSA ABLOY Global Solutions is dedicated to reimagining how people move through their world. Our expertise in customer journey mapping, innovation, and service design leads to the invention of new security solutions that create value for our clients and exceptional experiences for end users.
